Urbanization and Wildlife Health: Why Should People Care?

Speaker Bio: Hernandez received her DVM from Louisiana State University School of Veterinary Medicine (1996), and Ph.D. at UGA's Odum School of Ecology (2008). Now an assistant professor in wildlife disease at UGA, her research revolves around how human activities affect the health and disease dynamics of wildlife populations. Current or recent projects include: basic ecology of the pygmy hippo, transmitter effects on sturgeon, antimicrobial resistance of fecal bacteria of Tokay geckos, the effects of domestic cats on urban wildlife, pathogens of urban white ibises, the effects of mercury and PCB's on least terns and *Salmonella* wildlife surveillance.

Sonia Hernandez, DVM, PhD, Dip ACZM

Assistant Professor, Wildlife Disease
Warnell School of Forestry and Natural Resources &
Southeastern Cooperative Wildlife Disease Study
Department of Population Health, College of Veterinary Medicine
The University of Georgia, Athens, Ga.

Wednesday, April 17, 2013, 1:30 p.m.

Paul D. Coverdell Center for Biomedical and Health Sciences, Room 175
The University of Georgia, Athens, Ga.

Sponsored by the UGA Biomedical and Health Sciences Institute
